

## Manual Entry

Your program comes with the ability to integrate with many wireless devices and apps to help automatically pull in steps for your users. However, not everyone has a wireless pedometer or smartphone and will need to be able to enter in steps without those. If this is the case for several members of your organization, you will want to allow the ability to have manual entry ON in your program.

1. Click on Program Settings from the Command Central landing page.
2. Under "Devices" in the right-hand corner of the page you can select or un-select the ability to allow for manual entry.
3. Click "Update" at the bottom of the page to save your selection.
