

Device Syncing

In order to get steps from a wireless device over to a Walker Tracker account, the device must **first** be registered to the provider's site. Example: Fitbit needs to be registered and linked to an account at Fitbit.com.

Once the device is registered to the provider's site it can then be linked to Walker Tracker. We have guides on this by clicking on the Help section in the upper right-hand corner of the website.

A person will then need to make sure to *sync their device to the provider's site* for steps to come over to Walker Tracker.

Walker Tracker: Syncing Devices & Apps

Walker Tracker offers a wide variety of device and apps that can be linked to our site. Check out how they sync below!
